

Bhone Sithu

Software Engineer

Hi, as you might have noticed, I have been studying software development since 2018. Yet I am not mastered in any language and I do not have work experience. These are my weaknesses and hey I have my strengths too. I am a **responsible person** and I tried my best to finish any works that I am assigned to. I can also **control my emotions** and **be a professional** which is a critical point in teamwork. I am also an **open-minded person** and willing to learn new things. At the moment, I am looking for work experience and who knows, that work experience would make me commit to one field and master it one day.

Education

Bachelor of Science (Hons) in Computing
Institution: University of Greenwich
